FORMATION FUSION CEN

WEATHER FORECAST FOR SEA AREAS AROUND THE ISLAND DURING NEXT 24 HOURS

Issued at 05.30 a.m. on 14 February 2026

DEPARTMENT OF METEOROLOGY
SRI LANKA

COLOMBO - SRI LANKA

CONDITION OF THE RAIN

Showers may occur at times in the sea areas off the coast extending from Hambantota to Trincomalee via Pottuvil.

Showers or thundershowers may occur at several places in the other sea areas around the island in the evening or night.

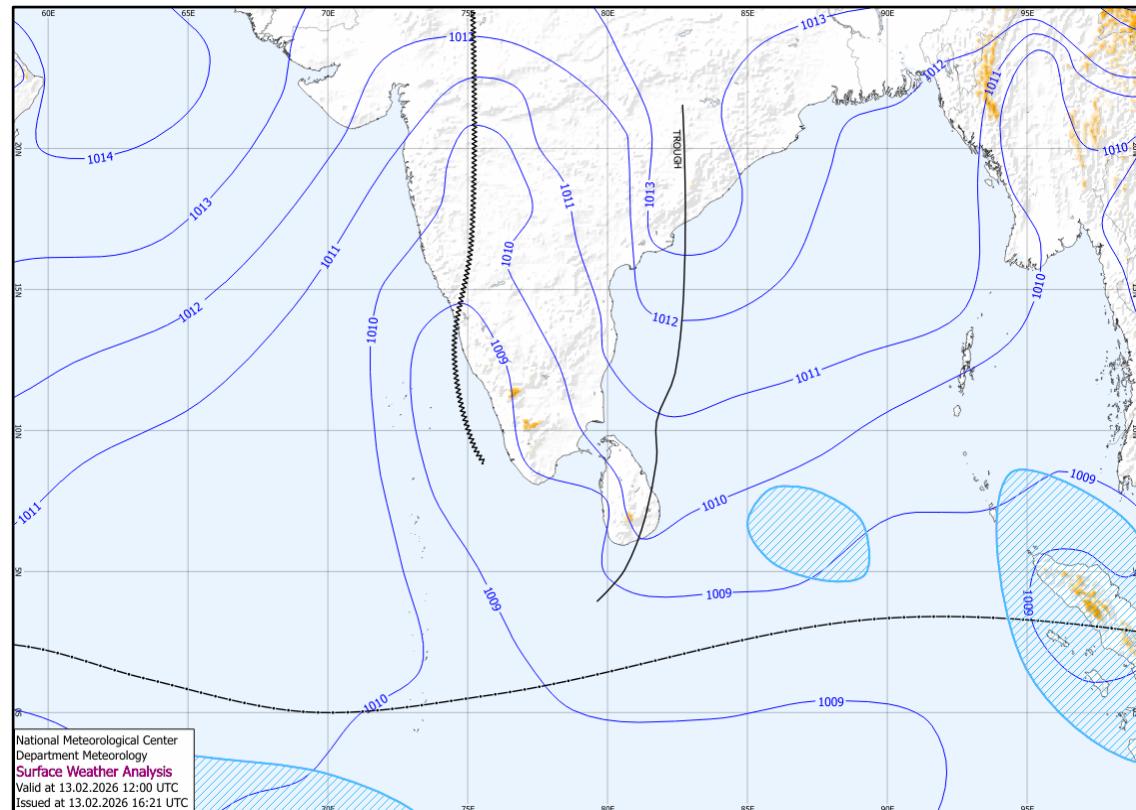

WINDS

Winds will be north-easterly and wind speed will be (30-40) kmph. Wind speed can increase up to (45-50) kmph at times in the sea areas off the coast extending from Kaluthara to Mannar via Puttalam and from Hambantota to Pottuvil.

STATE OF SEA

The sea areas off the coast extending from Kaluthara to Mannar via Puttalam and from Hambantota to Pottuvil will be fairly rough at times. Other sea areas around the island will be moderate. Temporarily strong gusty winds and very rough seas can be expected during thundershowers.

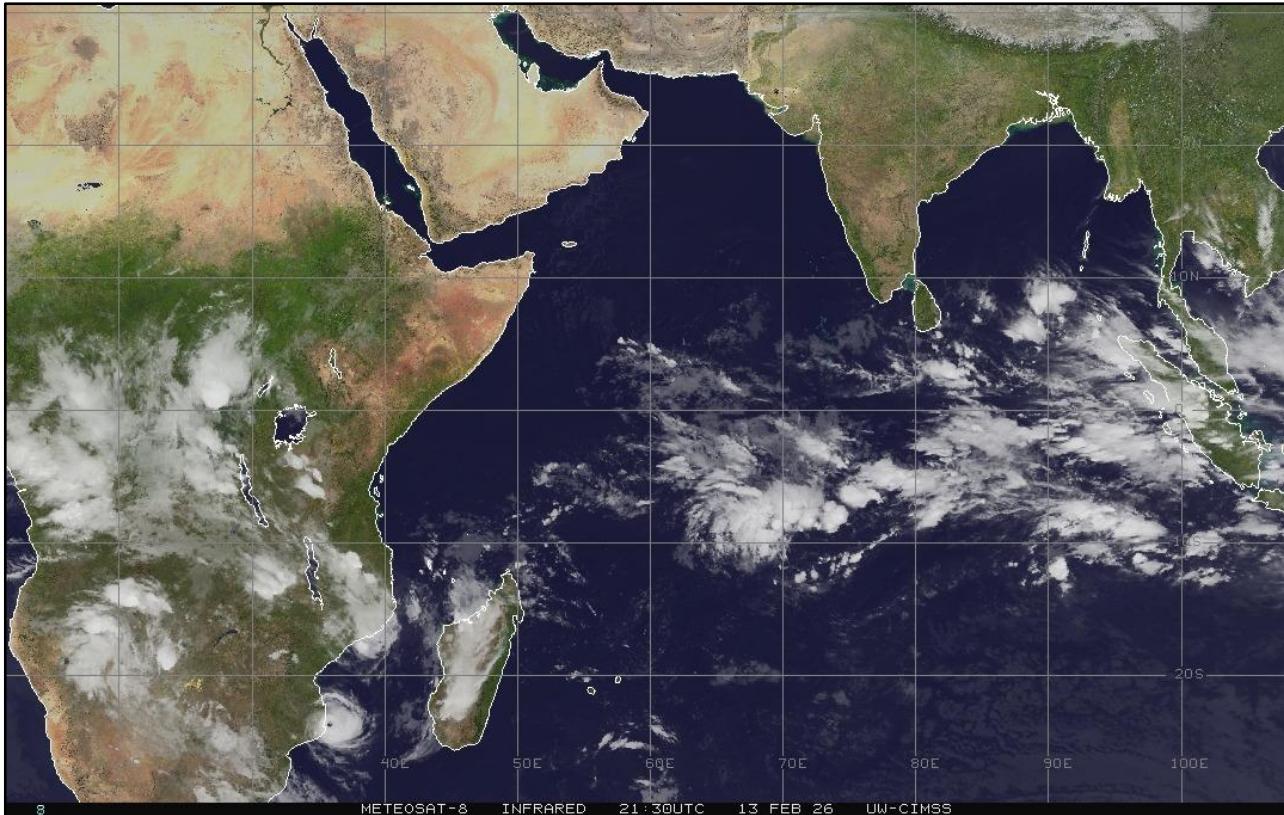

SURFACE ANALYSIS CHART

This analysis charts show the surface pressure pattern over Sri Lanka and the surrounding area. They display isobars (lines of equal pressure) and indicate areas of high (H) and low pressure (L) along with their central pressure value. Isobars are represented by solid blue lines, spaced every 1 hPa. High pressure is usually associated with mainly dry, settled weather with light winds, while low pressure is normally associated with unsettled weather, which is often wet and windy. The lower the pressure, generally the stronger the winds and the heavier the rain.

The map shows Coordinated Universal Time (UTC) and the local time is UTC+5.30.
